Thoothukudi, Tamil Nadu

Summary

Computer Science Engineering student interested in cybersecurity. I have basic experience in building SOC dashboards, analyzing security events, and understanding web vulnerabilities. I am learning security tools and networking fundamentals, Actively learning and working on projects to grow skills and contribute to real-world security teams.

Education

- | | |
|---|-------------|
| • Erode Sengunthar Engineering College
M.Tech - Computer Science And Engineering (Integrated) - CGPA: 8.18 (6 th Semester) | 2022 - 2027 |
| • Daniel Thomas Matric Higher Secondary School
HSC: 76.1% SSLC: 63.6% | 2019 - 2022 |

Technical Skills

- **Web Security:** Vulnerability Testing, OSINT, SQLi, XSS.
- **Security Tools:** Burp Suite, Nmap, Wireshark, Metasploit.
- **Networking:** OSI/TCP-IP, Routing.
- **Operating Systems:** Linux, Windows.
- **Programming Language:** Python, SQL.
- **Version Control:** Git, GitHub.

Soft Skills

- Communication
- Adapdability
- Collaboration

Projects

- | | |
|--|----------------------|
| • SOC -X
SOC-X is a security operations web dashboard that ingests events from a Flask API and displays them as alerts and incidents. It analyzes these events to determine the system's threat level and allows SOAR-style response actions such as playbook execution, brute-force blocking, vulnerability scanning, and malware quarantine in real time. | July 2025 - Aug 2025 |
| • PUP - Pentest Unified Platform
A simulation-based SOC and penetration testing dashboard built to demonstrate security analysis workflows. The platform visualizes simulated packet traffic, vulnerability insights, and attack surface mapping to help users understand common security threats and defensive monitoring techniques. | Oct 2025 - Dec 2025 |
| • F.A.S.A - File Automation and Security Assistance
Developed a secure file analysis and automation platform to monitor and organize system files. Implemented automated file scanning and structured categorization to improve file management and visibility. Designed an interactive web interface for analyzing file metadata and system storage patterns. Built using a modular and scalable architecture to demonstrate security-focused system design principles. | Feb 2026 - Apr 2026 |
| • S.E.N.T.R.Y – Secure Encryption & Networked Threat Response sYstem
Developing an intelligent security platform for secure file access and threat-aware monitoring. The project focuses on encrypted file management, authorization-based transfers, session validation, security event tracking, and a scalable architecture for future anomaly detection and automated protection capabilities. | May 2026 - 2026 |

Achievements

- **Best Innovative Idea Award** - HACKZILLA 2k25 Hackathon (KPRIET) - **Modus Mapping**

Co-curricular Activities

- **2nd Prize** - VYASA 2K26 Event (Inter College), ESEC.
- **Finalist** - BitNBuild'25 Hackathon (State Rounds), GDSC CRCE - **Modus Mapping**

Certifications

- **Cybersecurity** - Infosys Springboard
- **Introduction to Python** - Infosys Springboard
- **Cybersecurity Professional Certification** - Google, Coursera(Ongoing)
