Summary

Computer Science Engineering student interested in cybersecurity. I have basic experience in building SOC dashboards, analyzing security events, and understanding web vulnerabilities. I am learning security tools and networking fundamentals, Actively learning and working on projects to grow skills and contribute to real-world security teams.

Education

- Erode Sengunthar Engineering College** 2022 - 2027
M.Tech - Computer Science And Engineering (Integrated) - CGPA: 8.18 (6th Semester)
- Daniel Thomas Matric Higher Secondary School** 2019 - 2022
HSC: 76.1% SSLC: 63.6%

Technical Skills

- Web Security:** Vulnerability Testing, OWASP, SQLi basics, XSS {basics}.
- Security Tools:** Burp Suite, Nmap, Wireshark, Metasploit.
- Networking:** OSI/TCP-IP, Routing {basics}.
- Operating Systems:** Linux, Windows.
- Programming Language:** Python {basics}.
- Version Control:** Git, GitHub.

Projects

- SOC -X** [Github](#)
SOC-X is a security operations web dashboard that consumes events from a Flask API, visualizes them as alerts/incidents, computes system threat level, and enables SOAR-style response actions like playbook execution, brute-force blocking, vuln scanning, and malware quarantining in realtime. This project is currently in the development stage.
- PUP - Pentest Unified Platform** [Github](#)
PEN-X (Pentest Unified Platform) is a SOC and penetration testing dashboard built to support security analysis. It provides real-time visibility using simulated packet analysis, vulnerability insights, and attack surface mapping. The platform help to understand security issues.
- F.A.S.A - File Automation and Security Assistance** [Github](#) • [Live Link](#)
FASA is a secure file analysis and automation platform that gives users clear visibility and control over their system data. It combines intelligent scanning, structured categorization, and an interactive UI to simplify complex file management workflows. Built with a scalable, modular architecture, it reflects practical implementation of security-focused system design in a modern web stack.

Achievements

- Best Innovative Idea Award** - HACKZILLA Hackathon (KPRIET)

Co-curricular Activities

- Finalist** - BitNBuild'25 Hackathon (State Rounds), GDSC CRCE

Certifications

- Cybersecurity** - Infosys Springboard
- Introduction to Python** - Infosys Springboard

Soft Skills

- Communication
- Adapdability
- Collaboration

Languages

- Tamil
- English
